DETAILED ACTION

Restriction Requirement

Restriction is required under 35 U.S.C. 121.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept.

In accordance with 37 CFR 1.142, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- I. Claims 20-26, 32-33, and 35, drawn to a conjugate or method of treating a cardiovascular disease using a peptide selected from SEQ ID NO: 2, 3, 4, 9, or 10, classified in class 530, subclass 300; class 514, subclass 2.
- II. Claims 31 and 36, drawn to a conjugate comprising a peptide of any length or a length less than 100 amino acids, classified in class 530, subclass 300+

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are drawn to conjugates that are related only by having a peptide.

However, because each invention is of different chemical and/or peptide and/or pharmaceutical substitutions, each invention differs (chemically, physically, or pharmacologically) and in function. Namely, Invention I discloses 5 distinct, searchable peptide compounds/sequences, while Invention II does not disclose any searchable peptide compounds/sequences. Therefore, a separate and distinct search is required for each invention and each invention is patentably distinct from the other.

The several inventions above are independent and distinct, each from the other. They have acquired a separate status in the art as a separate subject for inventive effect and require

Art Unit: 1654

independent searches. The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference, which would anticipate the invention of one group, would not necessarily anticipate or even make obvious another group. Finally, the consideration for patentability is different in each case. Thus, it would be an undue burden to examine all of the above inventions in one application. Restriction for examination purposes is therefore proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not necessarily required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
